

CONTENTS

PREFACE

Chapter 1 TRIGONOMETRY

1.0	Introduction	1
1.1	Sum and product formulae	1
1.2	Linear combinations of sin and cos	4
1.3	Linear trigonometric equations	8
1.4	More demanding equations	10
1.5	The inverse trigonometric functions	11
1.6	General solutions	12
1.7	Calculus of the inverse trigonometric functions	17
1.8	The ' $t = \tan \frac{1}{2}A$ ' substitution	21
1.9	Harder integrations	25
1.10	Miscellaneous Exercises	30

Chapter 2 HYPERBOLIC FUNCTIONS

2.0	Introduction	33
2.1	Definitions	33
2.2	Osborn's rule	35
2.3	Further functions	35
2.4	Graphs of hyperbolic functions	36
2.5	Solving equations	37
2.6	Calculus of hyperbolic functions	39
2.7	Inverse hyperbolic functions	41
2.8	Logarithmic equivalents	42
2.9	Derivatives of inverse hyperbolic functions	44
2.10	Use of hyperbolic functions in integration	46
2.11	Miscellaneous Exercises	50

Chapter 3 COMPLEX NUMBERS

3.0	Introduction	55
3.1	Complex number algebra	59
3.2	Solving equations	62
3.3	Argand diagram	64
3.4	Polar coordinates	65
3.5	Complex number algebra	67
3.6	De Moivre's theorem	69

3.7	Applications of de Moivre's theorem	73
3.8	Solutions of $z^3 = 1$	75
3.9	Euler's theorem	76
3.10	Exponential form of a complex number	78
3.11	Solving equations	78
3.12	Loci in the complex plane	80
3.13	Miscellaneous Exercises	86

Chapter 4 VECTORS

4.0	Introduction	89
4.1	Vector representation	90
4.2	Vector addition	91
4.3	Position vectors	93
4.4	Components of a vector	97
4.5	Products of vectors	100
4.6	Applications	107
4.7	Miscellaneous Exercises	110

Chapter 5 VECTOR GEOMETRY

5.0	Introduction	111
5.1	Straight line	112
5.2	Equation of a plane	116
5.3	Miscellaneous problems	121
5.4	Miscellaneous Exercises	128

Chapter 6 SEQUENCES AND SERIES

6.0	Introduction and revision	131
6.1	Arithmetic and geometric sequences and series	133
6.2	The sigma notation	134
6.3	Proof by induction	137
6.4	The difference method	142
6.5	Infinite series	148
6.6	Infinite binomial series	151
6.7	Conditions for convergence of the binomial series	154
6.8	Maclaurin expansions	158
6.9	General terms	164
6.10	Miscellaneous Exercises	166

Chapter 7 PROPERTIES OF CURVES

7.0	Introduction	169
7.1	Graphs of standard functions	171
7.2	Important points	172
7.3	Asymptotes	175
7.4	Restricted regions	180
7.5	Symmetry	183
7.6	Associated graphs	186
7.7	Parametric forms	191
7.8	$\frac{dy}{dx}$ and $\frac{d^2y}{dx^2}$ from the parametric form	195
7.9	Conic sections	197
7.10	Applications	200
7.11	Miscellaneous Exercises	206

Chapter 8 FURTHER CALCULUS

8.0	Introduction	211
8.1	Implicit functions	211
8.2	Approximate integration – trapezium rule	214
8.3	Simpson's rule	217
8.4	Volumes of revolution	220
8.5	Lengths of arcs of curves	224
8.6	Curved surface areas of revolution	227
8.7	Reduction formulae in integration	230
8.8	Miscellaneous Exercises	233

Chapter 9 MATRICES AND TRANSFORMATIONS

9.0	Introduction	235
9.1	Special matrices	240
9.2	Transformation matrices	244
9.3	Invariancy and the basic transformations	245
9.4	The determinant	250
9.5	The rotation and reflection matrices	251
9.6	Stretch and enlargement matrices	256
9.7	Translations and standard forms	257
9.8	Linear transformations of the plane	258
9.9	Composition of transformations	261
9.10	Eigenvalues and eigenvectors	265
9.11	Miscellaneous Exercises	271

ANSWERS 273
